Other Publication

Software

- [qDesingularization.m](#), a Mathematica package for computing desingularized operators and the q -Weyl closure of a given q -difference operator in the first q -Weyl algebra. It is based on joint work with Dr. Christoph Koutschan. The package requires the availability of Koutschan's package [HolonomicFunctions.m](#) and Kauer's package [Singular.m](#). For a description of the usage of the package, see the [Example.nb](#) notebook.
